

Welcome to *The Current*, the North Central Region Water Network's Speed Networking Webinar Series

Groundwater Quality and Nitrate: 2PM CT

1. Submit your questions for presenters via the chat box. The chat box is accessible via the purple collaborate panel in the lower right corner of the webinar screen.
2. There will be a dedicated Q & A session following the last presentation.
3. A phone-in option can be accessed by opening the Session menu in the upper left area of the webinar screen and selecting "Use your phone for audio".

This session will be recorded and available at northcentralwater.org and learn.extension.org.

Today's Presenters:

- **Troy Gilmore**, Assistant Professor in the Conservation and Survey Division in the School of Natural Resources, University of Nebraska-Lincoln
- **Vasudha Sharma**, Assistant Extension Professor and Irrigation Specialist, University of Minnesota
- **Kevin Masarik**, Groundwater Education Specialist, University of Wisconsin-Madison Division of Extension and University of Wisconsin-Stevens Point

Troy Gilmore

Troy Gilmore is an Assistant Professor in the Conservation and Survey Division – School of Natural Resources with a joint appointment in the Department of Biological Systems Engineering. He earned his PhD in 2015 at North Carolina State University, in the Biological and Agricultural Engineering Department. His undergraduate degree is in Civil Engineering, also at North Carolina State University.

Groundwater Age: A Tool for Understanding Aquifer Impacts on Stream Water Quality

Troy E. Gilmore, Assistant Professor

Conservation and Survey Division – School of Natural Resources

Biological Systems Engineering

Vasudha Sharma

Vasudha Sharma is Assistant Extension Professor-Irrigation Specialist in the Department of Soil, Water and Climate and Department of Bioproducts and Biosystems Engineering at the University of Minnesota. She earned her M.S. and Ph.D. degrees in Biological and Agricultural Engineering from the University of Nebraska-Lincoln in 2014 and 2018, respectively. Her current research and extension activities include soil water monitoring, evapotranspiration (ET) measurements, soil-crop water dynamic, and irrigation scheduling and management to reduce irrigation-induced environmental pollution in Minnesota.

Irrigation Management Impacts on Corn Yield and Nitrate Leaching in Minnesota Central Sands

Outline

- Background
- Irrigation in Minnesota
- Ongoing Research Projects

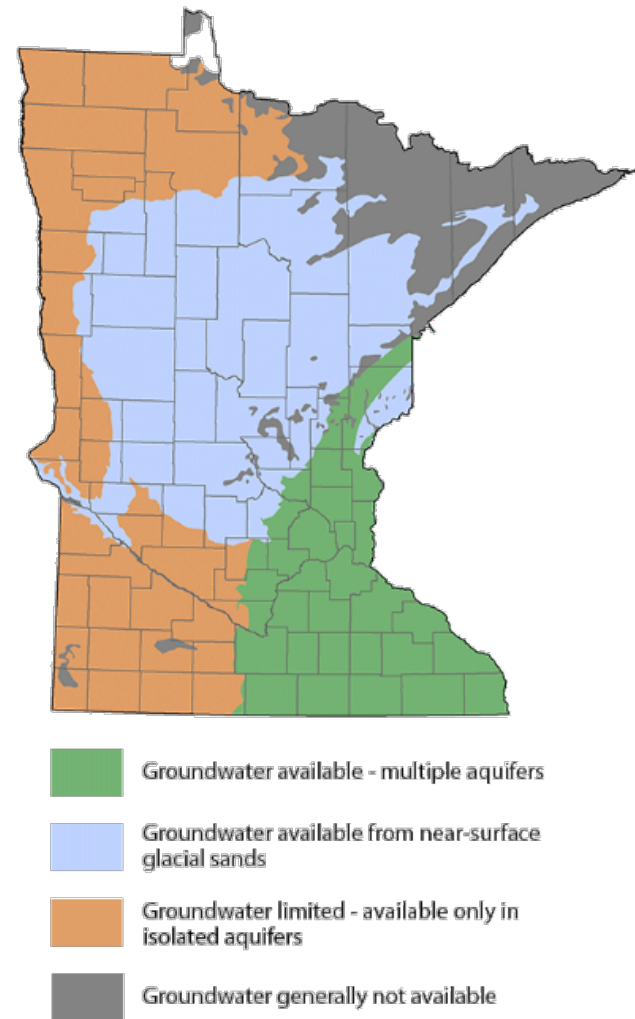

Background

- **Assistant Extension Professor-Irrigation Specialist:** University of Minnesota (2018-present)
- **Ph.D.:** University of Nebraska-Lincoln, Biological Systems Engineering Department (2014-2018)
- **Masters:** University of Nebraska-Lincoln, Biological Systems Engineering Department (2012-2014)
- **Undergraduate:** Agricultural Engineering from Punjab Agricultural University, Ludhiana, Punjab in 2012

Groundwater in Minnesota

- Groundwater is the primary source of drinking water for about 75% of all Minnesotans
- It provides almost all of the water used to irrigate crops
- Availability varies throughout the state
- The central region of the state is characterized by coarse textured soils formed from glacial outwash
- Groundwater and surface water are interconnected

Picture: <https://www.pca.state.mn.us>

Groundwater Contamination

- In central region of the state, only 37% of the streams meet water quality standards for aquatic life (MPCA).
- About 40 percent of the shallow wells (less than 30 feet deep) have higher nitrate concentrations for drinking water (MPCA).

25

Irrigation in Minnesota

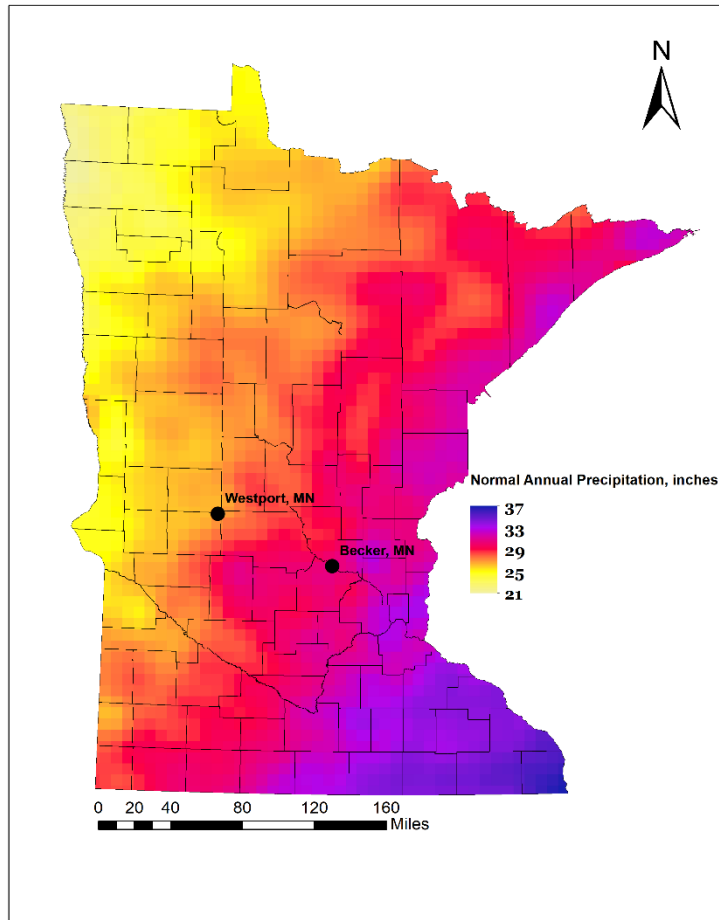

- Supplemental Irrigation is essential for crop production in central sands region: coarse textured soils and not enough precipitation in the growing season
- Extensive agricultural production with crops such as corn, soybean, wheat, potato, dry edible beans etc.
- Enhanced the stability of many local communities

Picture: https://files.dnr.state.mn.us/waters/gwmp/thresholds/gw-thresholds-project_groundwater-reviews.pdf

Irrigation Research In Minnesota

Irrigation and Nitrogen interaction study

Irrigation and N combination BMPs

Nitrate leaching under different irrigations

N- and Water-use efficiency

Evapotranspiration and crop coefficients

Comparison of different Irrigation methods

Impact of irrigation management strategies on total irrigation amount, crop yield and nitrate leaching.

Irrigation and Nitrogen Interaction 2019

- Main plots (4) are irrigation levels --100%, 75%, 50% irrigation and rainfed
- Subplots (6) are nitrogen rates -- 0, 70, 140, 210, 280 and 350 lb/ac N

MAKING A DIFFERENCE IN MINNESOTA: ENVIRONMENT + FOOD & AGRICULTURE + COMMUNITIES + FAMILIES + YOUTH

Kevin Masarik

Kevin Masarik is a groundwater education specialist with the University of Wisconsin-Extension and University of Wisconsin-Stevens Point. His research and outreach activities focus on assisting private well owners with management and assessment of water quality, quantifying the impacts of agricultural activities and other land-use on groundwater quality, and educating citizens and local officials about groundwater.

Using well water data for outreach to communities about nitrate and groundwater

Kevin Masarik

Center for Watershed Science and Education

Center for Watershed Science and Education
College of Natural Resources
University of Wisconsin-Stevens Point

Extension
UNIVERSITY OF WISCONSIN-MADISON

Through the University of Wisconsin-Extension, all Wisconsin people can access University resources and engage in lifelong learning, wherever they live and work.

Nitrate data for Wisconsin's private wells

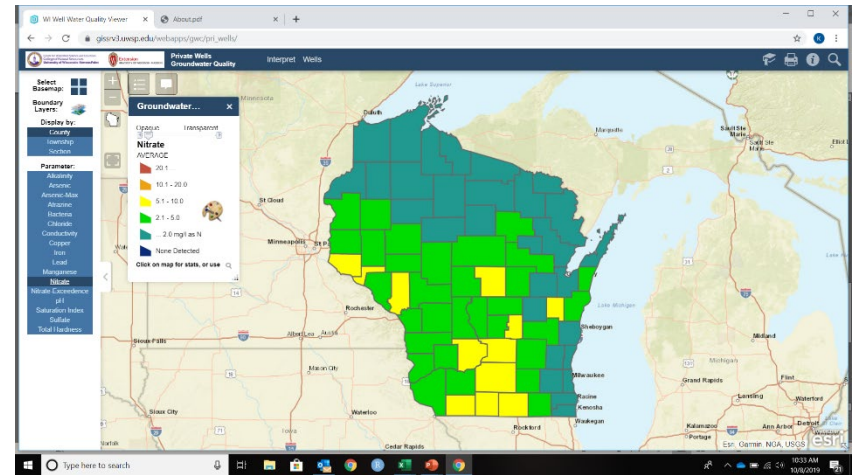

- University of Wisconsin-Stevens Point & UW-Extension, Private Wells Database contributed **105,381** samples
- The WI Dept of Agriculture, Trade, and Consumer Protection provided **8,236** samples
- The WI Dept of Natural Resources GRN system added **44,985**
- New WI Department of Natural Resources requirements of NR812 as of 2014 provided **59,677** additional samples
- The Eau Claire City-County Health Dept provided **2,189** analyses
- The La Crosse County Health Department provided **5,381** analyses

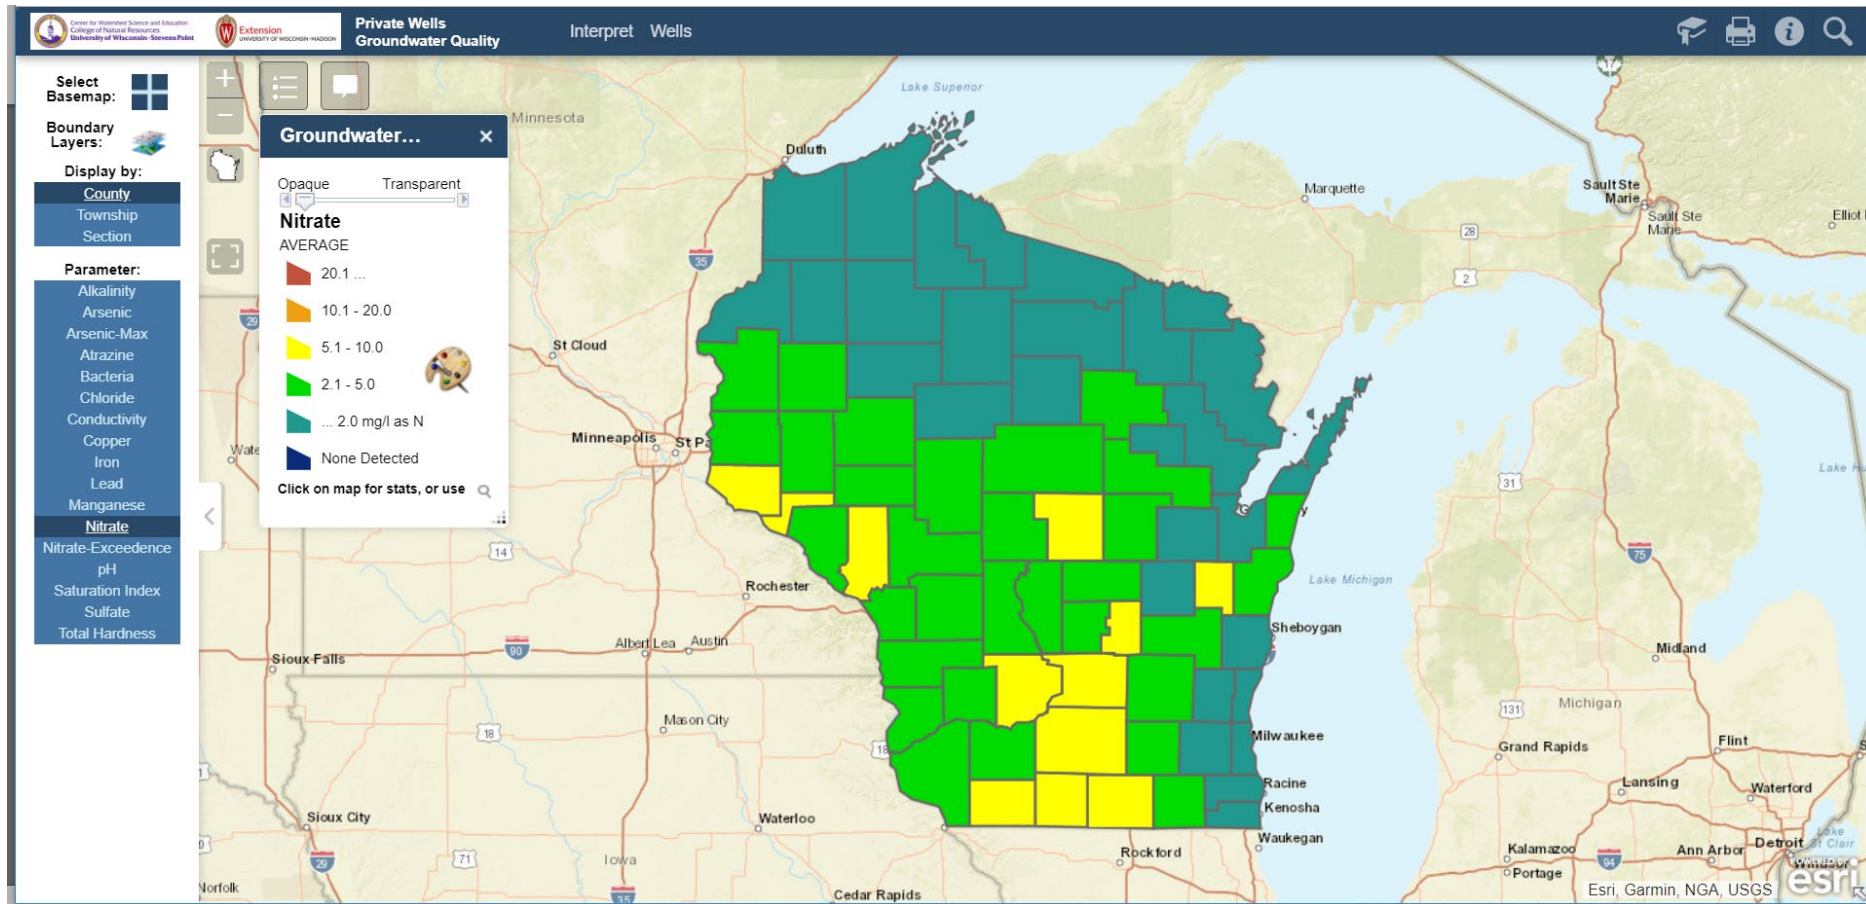

WI Well Water Viewer

Homeowners and local units of government can use this tool to:

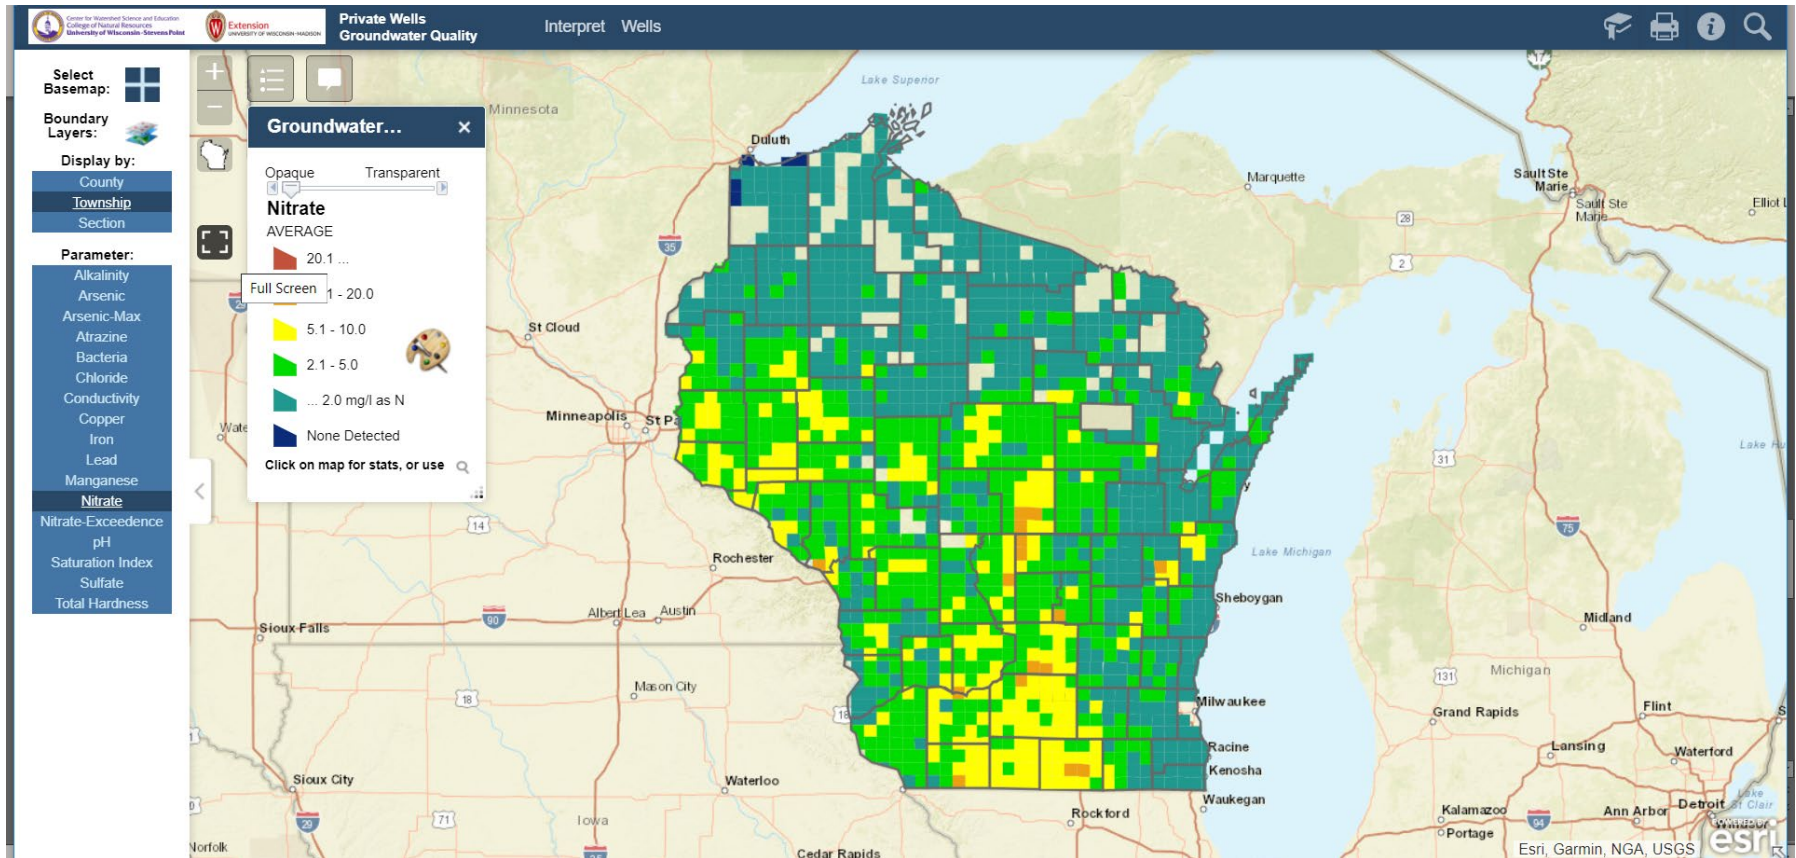

- Learn about general well water quality in Wisconsin
- Compare water quality to nearby towns or counties
- Raise awareness of local groundwater quality issues
- Promote testing and outreach efforts
- Encourage well testing in areas where little data exists
- Highlight the value of baseline data
